

Introducing the RGS Series

The Industry's most flexible, high performing, and intelligent 2-in-1 Regenerative Grid Simulator + Optional Load

Key Features

- 2-in-1 Regenerative Grid Simulator
 - » 4-Quadrant AC & DC Power Source
 - » AC & DC Electronic Load Option
- High Power Density Up to 21kW in 4U; Parallel up to 168kVA/kW per Cabinet, or Multiple Cabinets up to 252kW
- AC, and DC Output Capability, optional AC+DC mode
- · Single, Split, Three-Phase; Multi-Channel Mode
 - » Isolated Neutrals Available (Option W)
- Constant Power Voltage Range: 350Vac L-N/606Vac L-L or ±500Vdc
- High Frequency Range 15Hz 200Hz
- Galvanic Isolation from Facility AC Input to Output and Between Output Phases / Channels
- Dynamic, Quiet and Efficient Operation Using Silicon Carbide (SiC) Based Technology
- High AC Current Range
- Waveform Capture and Scope Display
- Powerful Line Disturbance Tools
- » Generate Harmonics and Interharmonics
- » Analog I/O Signals Standard
- Intuitive User Interface Using Softkeys & Shuttle
- SmartSource Suite: Web Browser Control
- IEC61000-4-13 Inter-Harmonics Test

GPIB RS232 USP I LAND

Flexible Control

RGS Series

2-in-1 Regenerative Grid Simulator & Load

The RGS Regenerative Grid Simulator is designed to emulate real-world grid connections for testing EV chargers, Solar PV inverters and smart-grid applications. The RGS's high-power density provides 12kVA/kW up to 21kVA/kW in a 4U chassis and can parallel up to 168kVA/kW in a single 19" cabinet. Dual cabinets can parallel up to 252kVA/kW.

The RGS Series is modular by design and scalable in power. Its flexible channel outputs and advanced control and programming capabilities make it ideal for generating complex user-defined waveforms.

Full operator control of power, frequency and phase angle settings allows for testing a wide range of gridtied products. Easily test your UUT to regulatory compliance standards such as IEEE 1547, UL 1741, IEC 61000-3, IEC 61000-4, and more.

Application Examples:

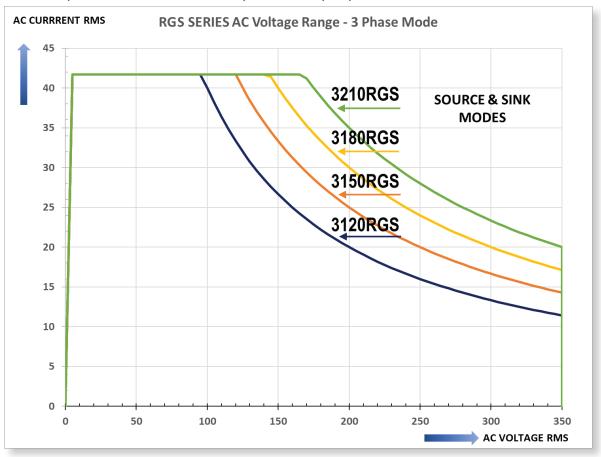

- EV Charging, On Board Chargers (OBC), Wallboxes, V2G, V2H, V2X, and EV Charging Cables
- Solar PV/Grid-Tied Inverters
- Energy Storage Systems (ESS), Home ESS
- Smart-Grid Simulation
- UPS Products and PDUs
- IEC Compliance Testing

Constant Power Voltage Range

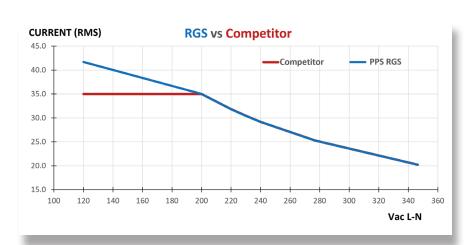

The RGS Series uses a single, constant power voltage range for both higher current at lower voltage and higher voltages at lower currents eliminating the need to switch between voltage ranges.

Typical dual range systems cause temporary output power loss when switching between ranges interrupting power to the unit under test. The RGS's constant power voltage range allows for testing a broad range of conditions and test requirements without interruption of output power.

More Current at Low Voltage

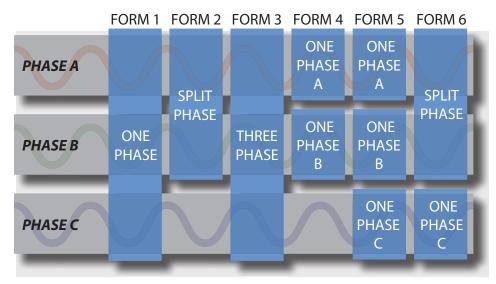

The RGS provides a broader range of current eliminating the risk of over or under sizing the power source. This reduces the need for additional capital investment. The diagram to the right illustrates the RGS's capability to provide 20% more current from 120V to 200V when compared to a typical unit that maxes out at 35A/phase.

Ultimate Flexibility With Six Output Configurations

Simultaneous AC & DC Operation on Individual Phases

Automatic Switching of Operation Modes

Flexibly test a wide range of gridtied conditions and EUTs selecting from six different output configurations in either source or load mode. Unique output configuration modes allow different functions per phase: AC Source, DC Supply or Electronic Load (option).

Forms 1 through 3 are typical for three-phase AC sources or loads and single, split or three-phase AC connections.

Regenerative Power Saves Significant Energy and Costs

Regenerative AC & DC power sources provide energy efficiency and significant cost savings by returning energy back to the facility or the grid. The RGS produces less heat, ensures a stable testing environment for reliability reducing the need for additional cooling systems. Regenerative bidirectional power flows are critical for simulating real-world conditions in transportation and renewable energy systems.

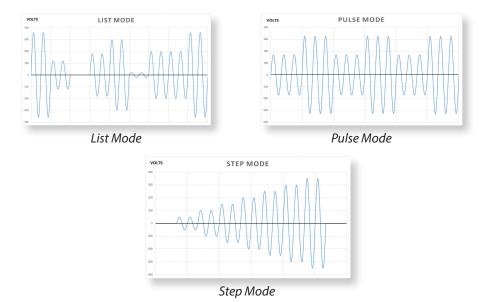

Powerful Waveform & Measurement Tools

The RGS has a built-in waveform digitizer and fast transient capabilities at 200µsec time resolution, supporting LIST, PULSE and STEP modes. Waveform generation includes ten Standard, Sine, Square, Triangle, Clipped, Harmonics and Inter-harmonics.

The waveform digitizer is complimented by a digital measurement system with scope function. Capture advanced measurements and waveforms.

Fully Test AC Power with 4-Quadrant Load (Option L)

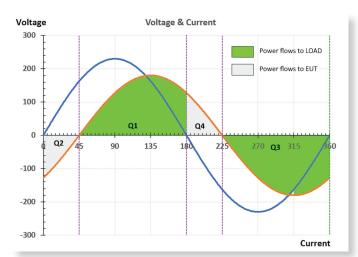

Optional load feature also supports testing PV inverters, V2G, EV Chargers, EVSE, batteries, UPS, and AC/DC power supplies. A key advantage of the RGS Regenerative Load Option is its ability to operate in all four quadrants using programmable phase shift in CC or CS modes.

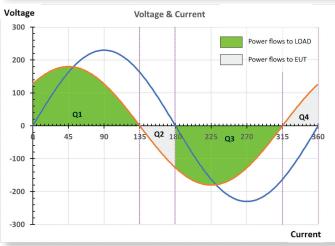

Compared to 2-Quadrant non-regenerative AC loads, the RGS allows simulation of inductive and capacitive loads to fully test AC power sources, as shown in the leading and lagging power factor examples.

The "L" Option adds Regenerative Electronic Load capability providing several AC and DC operating modes to push the boundaries of test environment. Simulate linear and non-linear loads (rectified), inductive and capacitive loads.

AC Modes: Constant Current, Constant Power & Apparent Power, Constant Resistance, Constant Voltage, CC+CR, CC / CS Rectifier Mode 1ø & 3ø

DC Modes: Constant Current, Constant Power, Constant Resistance, Constant Voltage, CR+CC

User Friendly Control Options

Multiple integrated control options include:

- •Intuitive Touch Screen LCD Display with Soft Key driven Menus
- SmartSource Suite Web Interface
- •LAN, GPIB, RS232 & USB Interfaces, and ModBus (optional)
- Supports external touch screen monitor via Video Output Interface

Simplify Test Automation with SmartSource Suite Remote Control Platform

Easily monitor, control, and manage testing with the RGS's **SmartSource Suite** remote control platform. Use the embedded, web browser interface with real-time control. Access control panels and test sequences on-premises or on any mobile device (laptop, phone, tablet) via secure client access.

- •Full control and measurement capability
- Program settings and measurement read back including digital scope and harmonics data
- Extensive safety protection settings
- Waveform selection, preview and edit modes
- Execution of user's custom test sequences
- Transient data entry and execution screen using a spreadsheet layout

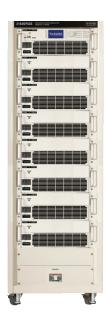

Built-in Galvanic Isolation Reduces Safety Risks

The RGS provides both facility-to-output isolation, and phase to phase or channel to channel isolation. Galvanic isolation provides complete separation between the input and output so there is no electron flow between channels. Channel to channel isolation provides flexibility to use each phase as its own independent power source with full frequency and voltage control. The RGS's fully isolated design reduces safety risks for the operator and prevents unexpected UUT damage by preventing unwanted current or ground loops. This built-in capability doesn't require a transformer which saves significant costs and space.

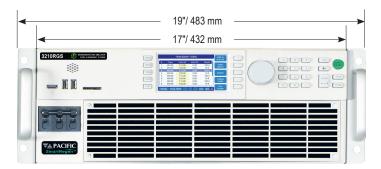

Modular Power up to 168kW/333A per Cabinet

The RGS Series provides modular and scalable power to meet changing test requirements. Easily parallel multiple chassis to reach up to 168kW with 333Amps per cabinet. Cabinets can be paralleled up to 252kW. The ease of reconfiguration allows for flexible test set ups and reduces downtime for repairs or maintenance. The units' shallower depth also allows it to fit into typical 31.5-inch / 800.1mm depth cabinets with ample room for air-flow and wiring.

RGS Dimensions & Accessories

178 mm (4U) The RGS is designed for bench top or 19" equipment rack operation. Product is shown with included rack mount handles.

Depth of chassis is only 25.0 inch / 635mm.

17"/ 432 mm

Note: Units can be zero-stacked in 19" EIA cabinet when using optional rack-slides. When using L-brackets, allow 1U space between units.

The RGS Rear Panel provides connections for AC Input, AC or DC Output, External Sense, Aux I/O and remote control interfaces. Product is shown with standard GPIB Interface.

Safety Cover & Strain Relief Kit Option

This optional kit includes covers for AC input and AC & DC Output connections. Both covers include wire strain relief to prevent accidental release of input or output wiring.

Note: AC input and AC output wiring is NOT included.

Note 1: Maximum Power rating is reduced below 40Hz on 3180RGS and 3210RGS models

Ordering Information

RGS Series Model Number Encoder:

Note: Solid outlined fields must be specified. Dashed outlined fields are optional.

Order Example 3210RGS-4CL

• Bench Model, 21 kVA, 3-Phase, Regenerative Grid Simulater with Load option, USB, RS232, LAN, GPIB & AUX I/O

Typical Delivery Items

- Power Source
- Rack Mount Handles
- Certificate of Compliance

Available Accessories

- Output shorting adapter for single phase output mode use. P/N 160086 (not for W)
- Paralleling Cable, 1 Ft. (Included with Aux NC models). P/N 778036
- Rack slides. P/N 703251

Software Options

Test Sequences

- IEC Test Suite Includes IEC 61000-4-11p, IEC 61000-4-14, IEC 61000-4-17, IEC 61000-4-27p, IEC 61000-4-28, IEC 61000-4-29p and IEC 61000-4-34
- IFC 61000-4-13 Standard

- IEEE 1547.1-2020
- Semi-F47-0706
- KS C 9610-4-11, KS C 9610-4-29

Test Sequence Options require use of the standard SmartSource Suite via LAN or USB, or PPSC Test Manager Windows Software. Contact factory for details.
