# DO YOU KNOW THESE PROBLEMS?

## COMMON MEASUREMENT SYSTEMS...

- ... often only support one or few dedicated sensor types
- ... do not provide enough or the right input channels
- ... are not made for harsh environments
- ... are difficult to supply in a vehicle
- ... are often bulky and heavy
- ... do not offer SAE J1939

# SOLUTION

DEWETRON

NEX[DAQ]

# HOW CAN THE NEX[DAQ] HELP YOU?

## INTEGRATED SENSORS:

Precision, sensitivity, reliability, delay, communication bus (CAN, CAN-FD, J1939)

## PASSENGER COMPARTMENT:

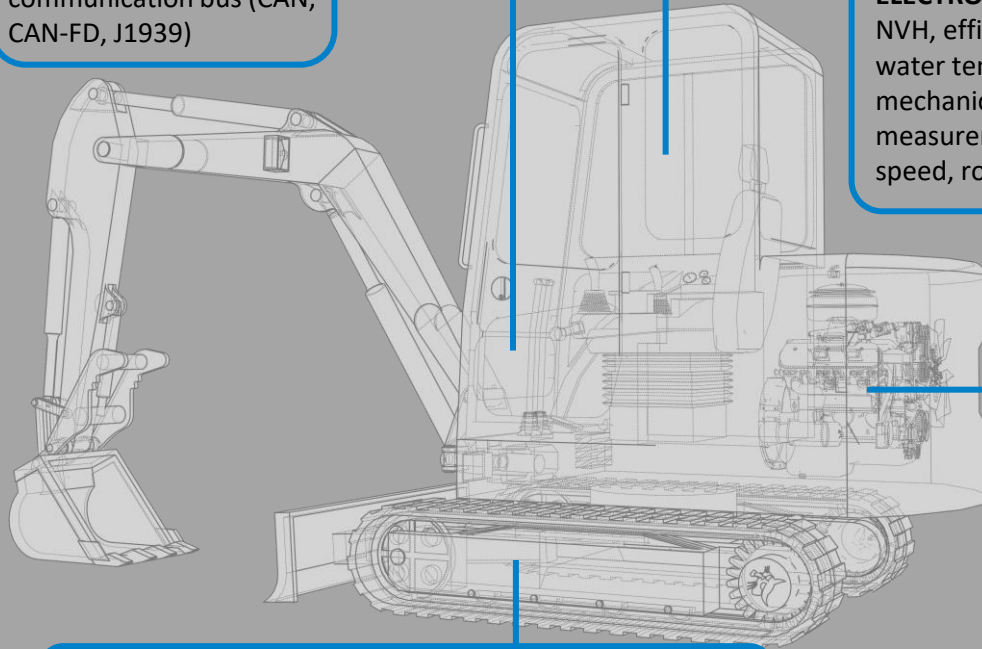

NVH, pressure, temperature

## ICE, ELECTRIC MOTOR, POWERTRAIN & POWER ELECTRONICS:

NVH, efficiency, temperature, water temperature, electrical & mechanical power measurement for BEV and HEV, speed, rotation, acceleration.

## ENVIRONMENTAL INFLUENCES:

i.e. exterior noises

## DRIVE TRAIN & ROAD CONTACT:

Wheel forces and torques, force measurement on the drive shafts (also during various driving situations), pressure

## FOR ELECTRIFIED VEHICLES:

**BATTERY:** Cell characterization, charge-discharge-cycles, efficiency, losses, life tests under different conditions, SoH, EoL, electrical power, temperature, range test, powertrain, electrical components, etc.

## CHARGING:

Charging and charging infrastructure analysis, efficiency, energy loss, power, charging efficiency, flow rate, electromagnetic compatibility (EMC) with charging stations (harmonics), load profile & charging duration.

## THERMAL MANAGEMENT TEST:

The NEX[DAQ] and our XR modules are ideal for thermal management tests, temperature monitoring in the cooling circuit but also for electrical power analysis.

## FIELD TESTS:

If you do tests on excavators, bulldozers or other heavy machineries you need a rugged & small DAQ systems several analog and digital inputs as well as counter channels. Also, you need several mounting options. The NEX[DAQ] offers you exactly all those things.

## SIMPLE NVH TEST:

Microphones and accelerometers can be connected for air- and structure borne noise related tests. As the NEX[DAQ] is fanless it can be put close to the DUT to minimize the cable lengths.

## POWER MONITORING

The NEX[DAQ] together with a MS12-V-600 and current clamps is the ideal solution for in-field power measurements on the generator of the DUT. In addition, the signals on the DUT's communication bus can be monitored as reference.

## FULFILLMENT OF LABOR REGULATIONS

Strong vibrations and noise are caused by heavy duty machines that can affect the driver. The vibration and noise inside the driver's cabin can be measured to ensure that labor regulations are fulfilled, and the driver is not harmed

## COMPONENT TESTS

The NEX[DAQ] can be used to measure strain, force and load on an excavator arm or can measure the pressure at different points in the hydraulic circuit simultaneously. The rugged design allow a mounting on the outside close to the measurement position.

# THUS THE NEX[DAQ] IS

## the ideal DAQ system...

- > to identify the cause of problems - especially when you need several sensors like:
  - > Accelerometer
  - > Microphone
  - > Speed and angle sensors
  - > CAN or CAN-FD interface
  
- > with multiple power supply options:
  - > Power-over-Ethernet oder USB-C
  - > or powered by the vehicle supply or a power bank
  
- > for low-channel-count measurements with per channel sample rate capability up to 1 MS/s

DEWETRON

# NEX[DAQ] – the ideal DAQ system because ...

you can take it everywhere with you

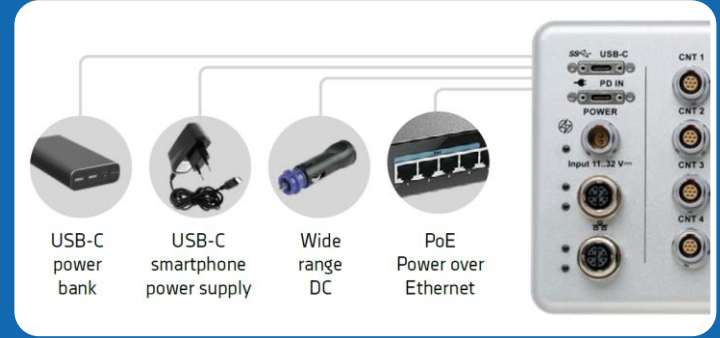

1250 g  
2.76 lbs

242 x 120 x 43.3 mm  
9.52 x 4.72 x 1.7 in

**COMPACT & PORTABLE**

**MULTIPLE POWER SUPPLY OPTIONS**

**IP67 RATING**

**FANLESS**

**-20 °C TO +70 °C**

# NEX[DAQ] – the ideal DAQ system because ...

4 ADVANCED COUNTER  
(e.g. for encoder)

8 DI + 4 DO  
8 COUNTER

SYNCHRONIZATION via  
Ethernet, PTP, IEEE1588

ETHERNET or USB-C  
CONNECTION  
to PC for data transfer

2 interfaces for CAN-FD and XR-module connection

XR modules for low-speed channel expansion, e.g.  
for many temperature channels.

UNIVERSAL ANALOG INPUT CHANNELS  
(native direct inputs + additional via MSI)

NATIVE INPUTS

VOLTAGE

BRIDGE

CAN-BUS

DIGITAL I/O

COUNTER

ADDITIONAL INPUT SIGNALS: Every common analog sensor is  
supported with DEWETRON's MSI sensor adapters

VOLTAGE

CURRENT

LVDT

THERMO-  
COUPLE

POTENTIO-  
METER

RTD

CHARGE

VIBRATION

# NEX[DAQ] – the ideal DAQ system because ...

DEWETRON

it is versatile

## MOUNTING OPTIONS

You can fix the NEX[DAQ] in the measurement environment in several ways like with belt, DIN rail or screws.

## EXPANDABLE

Dasychain multiple NEX[DAQ]s to a multi-channel-system. A single cable is sufficient for data transfer and synchronization via Ethernet PTP/IEEE1588.

# NEX[DAQ] – the ideal DAQ system because ...

DEWETRON

## it already comes with OXYGEN

### OXYGEN is our intuitive & easy-to-use measurement software

#### Standard Software Features:

- > Analysis & post-processing
- > Visualization
- > Math & calculation
- > Trigger features
- > FFT analysis
- > Export features
- > Reporting
- > ... many more features available!

# NEX[DAQ] & OXYGEN

OXYGEN runs without restrictions on **Windows** and **Linux** based operating systems.

The Linux distributions Red Hat Enterprise Linux 8 (RHEL8) and Ubuntu are supported.

# ABOUT DEWETRON

Founded in 1989

Head Office in Grambach (AT)

Subsidiaries in DE, USA, CN & IN

Since 2016 part of the TKH group

120 employees in more than 25 countries

**> 25.000**
