EL+ vHiL ePlus

## Regenerative AC/DC Electronic Load

cinergia

The EL+ vHiL is CINERGIA's Current Source optimized in performance and price for Power Hardware in the Loop applications. This version keeps the software and functionalities of CINERGIA's EL+ vAC and it includes Power Amplifier functions to interface with Real Time Control Systems.

Regenerative Technology

Thanks to our bi-directional topology, the AC/DC Electronic Load Converter are regenerative, resulting in a reduction of both the consumed energy during the tests and the power required from the electrical installation.

This technology allows us to work in both directions, as power generators or offering a consumption for the realization of all types of tests.
## Main Applications

Electromobility	Smart Grids	Avionics	IEC Testing	Photovoltaic	Power HiL

Bidirectional and Regenerative

**Clean grid current**
THDi <3% and PF > 0.98

13 Models
from 7.5kW to 160kW

Parallelization of units to increase the power

Independent phase configuration of
rms current, phase angle, harmonics, interharmonics, generation of fast transients ("Current Dips")

CC
CP
CZ

DC
CC
CV
CP
CR

Emulation of grid connected devices
Loads absorbing energy from grid
Generators injecting energy to the grid
Programmable Active/Reactive consumption
Non-linear currents up to CF of 3

Intuitive User Interface

**Modbus/Ethernet Open protocol, Labview drivers**

Bidirectional and Regenerative Hardware

The hardware platform is based on a Back-to-Back power conversion topology, formed by two IGBT-based power stages. The grid side stage is an Active Rectifier which produces clean sinusoidal currents with very low harmonic distortion and power factor clase to one.

The EUT side stage can be configured for AC voltage source or AC current source or DC output. In AC, voltage/current are controlled by using state of the art digital Proportional-Resonant controllers. In DC, the three independent buck-boost bidirectional legs enable the separated control of three different DC voltages or currents.

Block Diagram
Local Interface

Analogue and Digital IO ports
The isolated digital and analogue inputs/outputs permit the connection of the unit to External Controllers and Power Hardware in the Loop systems (option).

4.3" Touchscreen
Allows the local parameterization and command of the device, configuration of the communications link, plots the main signals and enables the local datalogging.

Safety First
The units integrate a local Emergency Stop pushbutton and two signals (input+ output) to be connected to the laboratory interlock system. Additionally, the digital outputs can be interfaced to safety tower lights.

Master/Slave
ePLUS is a modular platform enabling the master/slave connection of units with equal power.

EL+ vHiL ePlus

Better than ever,
the enhanced **Plus** family

What's better

MASTER/SLAVE CONNECTION
by using a fiber optics link to increase power/voltage capabilities:
GE in AC: can be connected in parallel
EL in AC: can be connected in parallel
B2C: can be connected in parallel, or series or both

FASTER
30kHz control loop frequency

MORE HARMONICS
50 per phase with 20 free-harmonics

DELTA LOAD
for the EL in AC mode

ADJUSTABLE DC TRANSIENT
controllers to improve stability of the system

OPTIMIZED RMS CALCULATION
for PV inverters anti-islanding test

SAME ELECTRICAL RATINGS
and SAME BANDWIDTH
because the power platform does not change so robustness and ratings remain the same.

cinergia
ePlus

Software

The user interface used by CINERGIA devices has been developed by our R&D team, to offer total control of the device, with a comfortable and intuitive design. This allows us to take full advantage of the capabilities of the device, as well as the programming and execution of standardized or self-created tests.

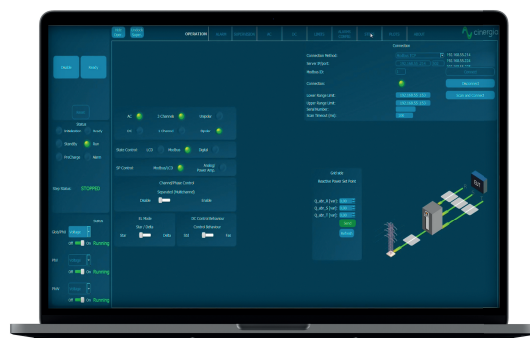

EL Modes

AC Operation

From this panel, the user can set all AC parameters. Each phase can be independently configured: RMS current magnitude, phase delay, harmonics content, free-frequency harmonic and transition ramps. A plot shows the expected real-time waveform, the FFT representation and the numeric data: RMS, peak, CF and THD.

Harmonics

The device can control simultaneosly the magnitude of the first 15 harmonics and one free harmonic per phase. The free one allows the generation of sub-harmonics, inter-harmonics and high frequency harmonics up to the 50th, setting both the magnitude and phase delay.
Power and Impedance Control

In Power mode, the active and reactive power of each phase is independently controlled. In Impedance mode, the device emulates an RLC load allowing to parameterize resistance, inductance and capacitance per phase making this device suitable for Anti-Islanding test of grid converters.

AC

Steps Mode

One of the most remarkable novelties of the new software is the steps funcionality. Step test files are saved and executed by the DSP allowing deterministic timing with a resolution of 66µs. The user gains access to all registers of the device to create complex test sequences which run directly in the converter without the need of an external computer.
Disturbance Generation

The steps mode includes pre-defined easy-to-use test panels. The AC faults panel is a powerful yet intuitive editor which allows generating and configuring flicker. Specific profiles can be saved in .csv files, modified, and reused by importing an existing one.
Linear & Non-Linear Emulation

The capacity to emulate linear and non-linear loads in one of the main features of the 4Q Electronic Load. Through our intuitive control software, the magnitude of harmonics can be set and different types of loads can be generated.

DC

DC Operation

This panel allows the user to access all DC setpoints and limits. Thanks to the unique Multichannel feature, each phase can have a different Operation Mode: voltage, current, power, resistance and advanced DC applications. Transition ramps, voltage and current limits can be modified. The limits for sink and source operation are different for safer testing, specially in battery applications.

Sequence

The User Interface Software integrates a Sequence Editor to create automatic test sequences, save them for future use and import them in .csv files. A smart datalogger can be activated from the LCD of the unit to record automatically the resulting voltage and current measurements with a time resolution of 400 ms.
Multichannel

Enabling the Separated Channel Control converts the device in three functionally independent DC Bidirectional Power Supplies, sharing the common negative rail. Each channel can have a different status (ON, OFF, Warning, Alarm), Operation Mode (see Range and Specifications table), Setpoint, Ramp and Limits.

Battery Pack Tester

This functionality enables the user to precisely control the charge, discharge and cycling of a Battery. Basic paramters include the charge/discharge current, fast charge and floating voltages while Advanced parameters add Energy (Ah) and Time as transition conditions. Profiles for each Battery technology can be saved and imported in .CSV files.

Battery Emulation

The B2C+ integrates a mathematical model to emulate the voltage behaviour of a real battery pack. The output voltage will change as a function of the SOC and Current. By configuring the provided parameters, the voltage profile can be adjusted to match different technologies: LiIon, NiMH, NiCd, Pb, Flux, etc.

PV Panel Emulation

The PV Panel model is based on the single-diode equivalent circuit of a PV cell and the series-parallel connection of cells to form a panel. A Runtime functionality allows the simulation of a complete day by launching different irradiance and temperature setpoints from a .csv file, enabling the user burn-in and functional tests of PV Inverters.

EL+ vAC/DC Range & Specifications

Input side (GRID side)

AC Voltage
Rated: 3x400Vrms +Neutral+ Earth
Range: +15% / -20%

Rated AC Current
Depends on model (see Wiring Manual)

Frequency
48-62Hz

Current Harmonic Distortion
THDi < 3% at rated power

Current Power Factor
PF > 0.98 at rated power

Efficiency
≥ 89% (7.5 & 10), ≥ 91% (15 to 30), ≥ 92% (40 to 200)

Output side in DC (EUT side)

Terminals
Number: 4 (3 phases + 1 neutral)

Configuration of Channels
Unipolar 3-channels 2Q, independent setpoints per channel
Unipolar 1-channel 2Q, one global setpoint for all channels
Multichannel: 2Q, independent start/stop, operation mode and setpoints
   per   channel (note: multichannel is an option for ≥ 80kVA)
Bipolar (4Q two independent setpoints)

Voltage (CV)
Range: 2Q: 20[1] to 750V (800V with High Voltage option)
              4Q: 0 to +350V / 0 to -350 (+ rail / 0 / - rail, Bipolar configuration)
Setpoint Resolution: 10mV
Effective Resolution[2]: < 0.05% of FS[3]
Setpoint Accuracy[4]: ± 0.1% of FS[3]
Transient Time[5]: < 1ms (10% to 90% at a step to V_{rated})
Ripple[7] (peak-peak): < 0.55% of FS[3]

Current Mode (CC)
Range: from 0 to ± 110% of I_{rated} (see models table)
Setpoint Resolution: 10mA
Effective Resolution[2]: < 0.05% of FS[3] (< 0.1% models 7.5 & 10)
Setpoint Accuracy[4]: ± 0.2% of FS[3]
Transient Time[5]: < 1ms (10% to 90% at a step to I_{rated})
Ripple[7] (peak-peak): < 0.7% of FS[3]

Power Mode (CP)
Range: from 0 to ± 200%[8] of P_{rated} (see models table)
Derived current setpoint: $P_{setpoint}$ / $V_{measured}$
Setpoint Resolution: 1W
Effective Resolution[2]: < 0.1% of FS[3] (< 0.25% models 7.5 & 10)
Setpoint Accuracy[4]: ± 0.4% of FS[3]
Transient Time[5]: < 2.5ms (10% to 90% at a step to P_{rated})

Resistance Mode (CR)
Range: from 0.1 to 1000 Ohm
Derived current: $V_{measured}$ / $R_{setpoint}$
Setpoint Resolution: 0.01 Ohm
Setpoint Accuracy[4]: ± 0.2% of FS[3]
Transient Time[5]: < 2ms (10% to 90% at a step to R_{rated})

Output side in AC (EUT side)

Terminals
Number: 4 (3 phases + 1 neutral)

Configuration of Channels
3 channels: 4Q, independent setpoints per phase
1 channel: 4Q, global setpoints for all phases (only in GE+)
Multichannel: 4Q, independent start/stop, alarm status and setpoints per
   phase (note: multichannel is an option for ≥ 80kVA)

Output side in EL-AC

Admissible Voltage
Connection: 1-phase, 3-phase star or 3-phase delta
Maximum: ± 400V peak
Range: 10-100Hz
$35^{(1)}$ to 277Vrms phase-neutral (295Vrms with HV option)
$35^{(1)}$ to 480Vrms phase-phase (510Vrms with HV option)
>100Hz: maximum rms voltage follows V·f < 46000
Frequency: 10 to 400Hz

Current Mode (CC)
Range: from 0 to ± 200%$^{(8)}$ of I_{rated} (see models table)
Setpoint Resolution: $10mA_{rms}$
Effective Resolution$^{(2)}$: < 0.05% of FS$^{(3)}$ (< 0.1% models 7.5 & 10)
Setpoint Accuracy$^{(4)}$: < ± 0.2% of FS$^{(3)}$
Transient Time$^{(5)}$: < 1.5ms (10% to 90% at a step transient)
Ripple$^{(7)}$ (peak-peak): < 0.7% of FS$^{(3)}$ (with Low Ripple Inductor option)

Phase Angle (cos ø)
Range: -90 to 90° in Sink / Source
Resolution: 0.01°

`Enhanced` **Harmonics**
Range: up to 50th
50 independent harmonics per phase:
20 free programmable frequency and phase from 0.1 to 50 times f_0
30 fixed frequency
Harmonics content: V-f < 46000 (with current derating)
Setpoint Accuracy$^{(4)}$: same as current accuracy
Small Signal Bandwidth: up to 5000Hz$^{(9)}$
Transient Time$^{(5)}$: < 2ms (10% to 90% at a step change)

Power Mode (CP / CS)
Range: from 0 to ± 200$^{(8)}$ of Prated (see models table)
Derived current setpoint: calculated from ISI and Φ(S)
Setpoint Resolution: 1W, 1VA
Effective Resolution$^{(2)}$: < 0.1% of FS$^{(3)}$ (< 0.25% models 7.5 & 10)
Setpoint Accuracy$^{(4)}$: ± 0.4% of FS$^{(3)}$
Transient Time$^{(5)}$: < 2.5ms (10% to 90% at a step to P_{rated})

`Enhanced` **Impedance Mode (CZ)**
Calculation method configurable (rms, instantaneous)
Range: from 0.8 to 1000 Ohm, 0.1 to 2000mH, 0 to 3.7mF
Derived current/phase setpoint: calculated from IZI and Φ(Z)
Setpoint Resolution: 0.01 Ohm/mH/mF
Setpoint Accuracy$^{(4)}$: see current accuracy
Transient Time$^{(5)}$: < 2.5ms (10% to 90% at a step to R_{rated})

Operation Modes

DC
Programmable Current (CC)
Power Amplifier (HiL)
Steps
Optional Programmable Voltage (CV)
Optional Programmable Power (CP)
Optional Programmable Resistance (CR)
Optional Battery Testing (BTest) (charge/discharge/cycling)
Optional Battery Emulation (BEmu)
Optional PV Panel Emulation (PVEmu)

AC
Programmable Current (CC)
Power Amplifier (HiL)
Steps
Optional Programmable Power (CP / CS)
Optional Programmable Impedance (CZ)

Overload/ Overcurrent

Admissible DC overcurrent is: 110% of rated value during 1 minute
Admissible AC overcurrent: 125% of rated value during 10 minutes,
150% during 1 minute, 200% during 2 seconds
Admissible overloads: 125% of rated value during 10 minutes,
150% during 1 minute, 200% during 2 seconds

User Interface

Local Control (4.3" Touchscreen panel)

Isolated Digital port: 6 inputs, 4 outputs

Isolated Analogue port: 6 inputs (rms setpoints or power amplifier), 6 outputs (rms readback or real-time readback)

Interlock port: 1 NC Input, 1 NO Output

Emergency Stop pushbutton

Remote Control Port

LAN Ethernet with Open Modbus-TCP protocol
RS485 (option), CAN and RS232 (using external gateway)

Options

Choose your options:

- Three channel mode: allows different operation mode start/stop/reset per channel (included in all models from 7.5 to 60, both included)
- 30kHz Switching Frequency: only available far models 15 (derated to 7.5kW), 20 (derated to 7.5kW) and 30 (derated to 10kW)
- Isolation monitor (advised far IT systems)
- Low current ripple inductance (included in all models ≤54kW. optional far models ≥80kW)
- High Frequency 360 - 900 Hz

- Anti-islanding monitor (only advised in net injection to the grid and following local regulations)
- High Voltage (HV): voltage up to 295Vrms phase-neutral in AC up to 800V in DC
- RS485
- Battery Emulation
- Battery Test
- PV Panel Emulation
- CV, CP, CR, CZ and CP/CS

All specifications are subject to change without notice.

1. Minimum voltage setpoint is 0V in DC. The recommended minimum setpoint far long-term use is 20Vrms in AC and 20V in DC,
2. Effective resolution measured with a 400ms window
3. FS Range of voltage is 800V (with High Voltage option)
   FS Range of current is 2·13 · Irated I (see models table)
   FS Range of power is 2·1200% · Prated I (see models table)
4. Accuracies are valid far settings above 10% of FS
5. Measured with the rated resistive load and high-dynamics controllers configuration.
6. Accuracy of measurements is ±0.1% of FS far rms voltage, ±0.2% of FS far rms current, ±0.4% of FS far active power(valid only above 10% of FS)
7. Consult us far lower voltage/current ripple requirements
8. Rated power figures are given at 20°C
9. The maximum output voltage depends on frequency following V·f < 46000
